

PROJECT DOCUMENTATION

InstaSites Fashion Store

WordPress + WooCommerce E-Commerce Website

A modern, responsive and feature-rich e-commerce platform built with WordPress and WooCommerce to provide a seamless shopping experience.

Product Catalog

Browse and shop thousands of fashion products.

Secure Checkout

Multiple payment options and secure transactions.

Customer Accounts

Easy account management, orders and wishlists.

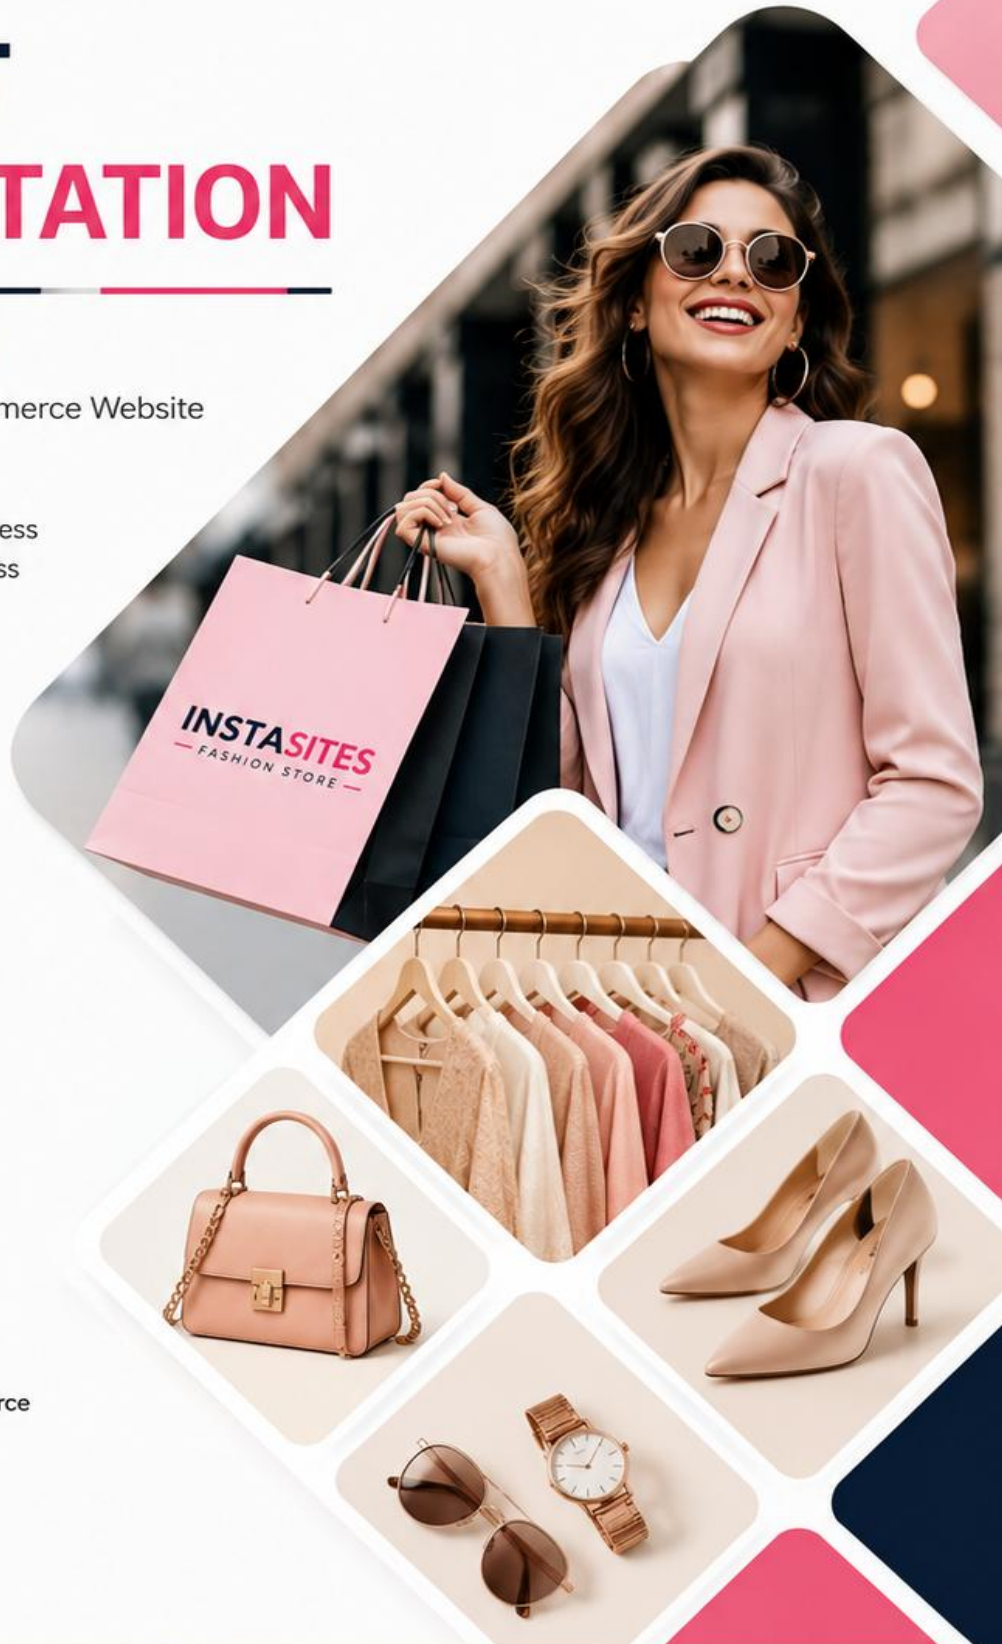

Performance & Security

Optimized for speed and secured with best practices.

PROJECT DETAILS

Project Name : InstaSites Fashion Store
Platform : WordPress 6.8 + WooCommerce
Database : MySQL 8.0.35
Backup Tool : WPvivid Backup
Theme : Astra
Page Builder : Elementor
Date : May 2025

InstaSites Fashion Store

Technical Project Documentation

This document is based on the uploaded WPvivid backup of the InstaSites fashion e-commerce website. The backup identifies WordPress 6.9, PHP 8.2.27 and MySQL 8.0.35. The project uses WooCommerce for commerce functionality, Blocksy as the active design ecosystem, Elementor/pro-elements and several WooCommerce enhancement plugins.

1. Project Overview

InstaSites is a WordPress/WooCommerce fashion storefront designed to present fashion products and categories and provide a complete customer shopping flow. The database contains published Shop, Cart, Checkout, My Account, Wishlist and Contact pages, along with WooCommerce product records including “Nike Shoe” and “Black Pouch”. The configured WooCommerce currency is LKR.

- Fashion product catalogue and category browsing
- WooCommerce product detail pages
- Shopping cart and checkout
- Customer account area with orders, downloads, addresses and account details
- Wishlist functionality
- Contact page
- Responsive theme/page-builder presentation

2. Technology Stack

Technology	Version / Component	Role
WordPress	6.9	CMS and application platform
PHP	8.2.27	Server-side runtime
MySQL	8.0.35	Database
WooCommerce	Installed plugin	Products, cart, checkout and commerce
Blocksy	Theme	Storefront theme
Elementor / Pro Elements	Installed plugins	Page building and visual layout
YITH WooCommerce Wishlist	Installed plugin	Wishlist functionality
LiteSpeed Cache	Installed plugin	Performance/caching
Side Cart WooCommerce	Installed plugin	Cart UX enhancement
WooLentor	Installed plugin	WooCommerce design enhancements

3. System Architecture

Fashion Store – System Architecture

WordPress + WooCommerce based E-Commerce Website

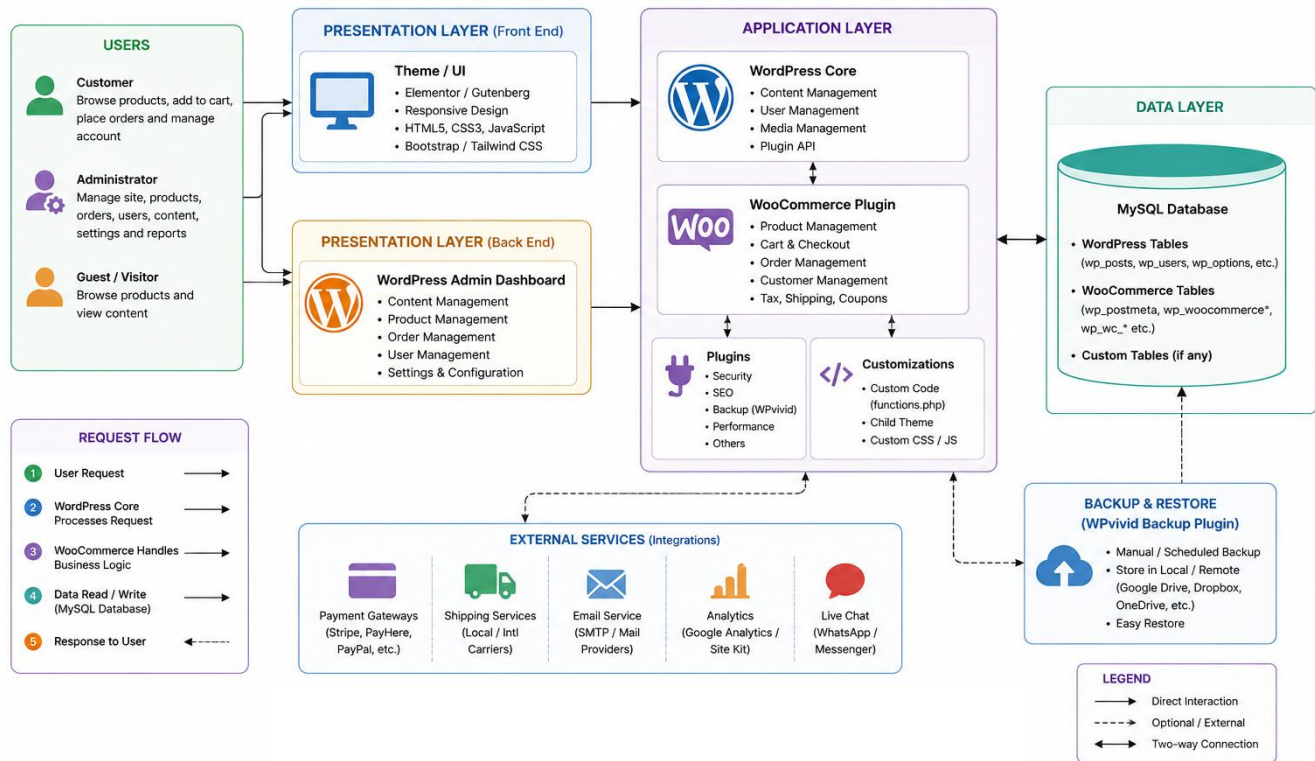

Figure 1. Architecture derived from the WordPress backup, installed theme/plugins and database package information.

4. Customer Shopping Workflow

Customer Shopping Workflow

This workflow represents the complete journey of a customer from visiting the store to placing an order.

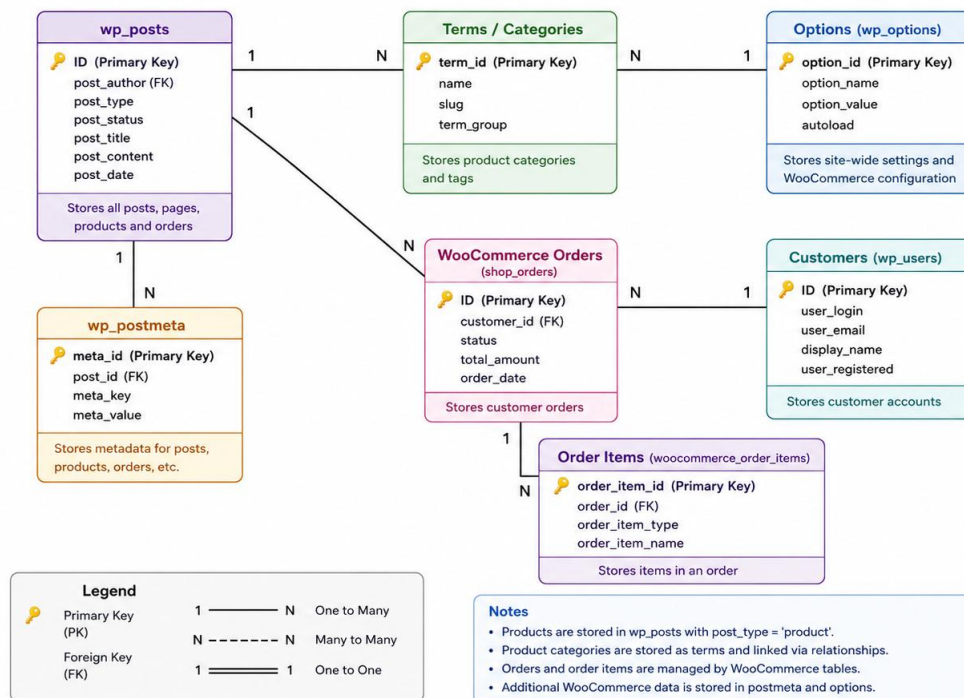

Figure 2. Typical storefront journey from discovery to account management.

5. Database & Content Model

WooCommerce Data Model – Conceptual View

This diagram shows the core WooCommerce entities and their key relationships.

The WPvivid database package contains standard WordPress tables such as wp_posts, wp_postmeta, wp_options, wp_terms and wp_term_relationships, together with WooCommerce tables for orders, order addresses, order items,

product lookup, sessions, shipping and tax data. The backup reports 455 wp_posts records and 2,312 wp_postmeta records.

6. Implemented Pages and Features

Shop

Published WooCommerce shop page for browsing the product catalogue.

Cart

Published page using the WooCommerce cart shortcode.

Checkout

Published page using the WooCommerce checkout shortcode.

My Account

Published WooCommerce account area with Dashboard, Orders, Downloads, Addresses, Account Details and Logout navigation.

Wishlist

Published wishlist page using YITH WooCommerce Wishlist.

Contact

Published contact page with Elementor-generated content and uploaded media.

Products

The database includes WooCommerce product records such as Nike Shoe and Black Pouch.

7. User Interface Screens

The backup contains the site's real uploaded fashion imagery and Elementor/Blocksy styling assets, but it does not include browser-captured screenshots of the running localhost website. The following documentation screens are faithful reconstructions using those real project assets and the pages/features confirmed in the database.

Home / Landing Page

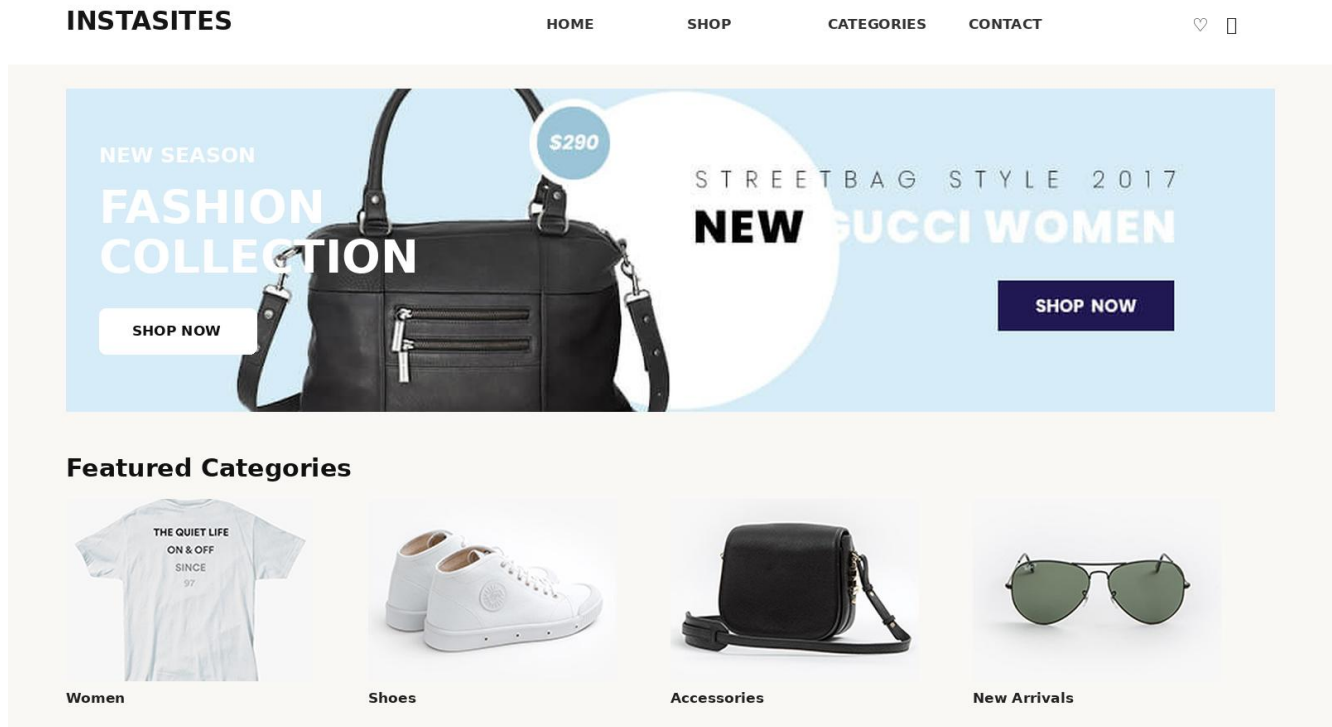

Figure. Fashion hero area and featured category presentation using media from the uploaded WordPress project.

Shop Page

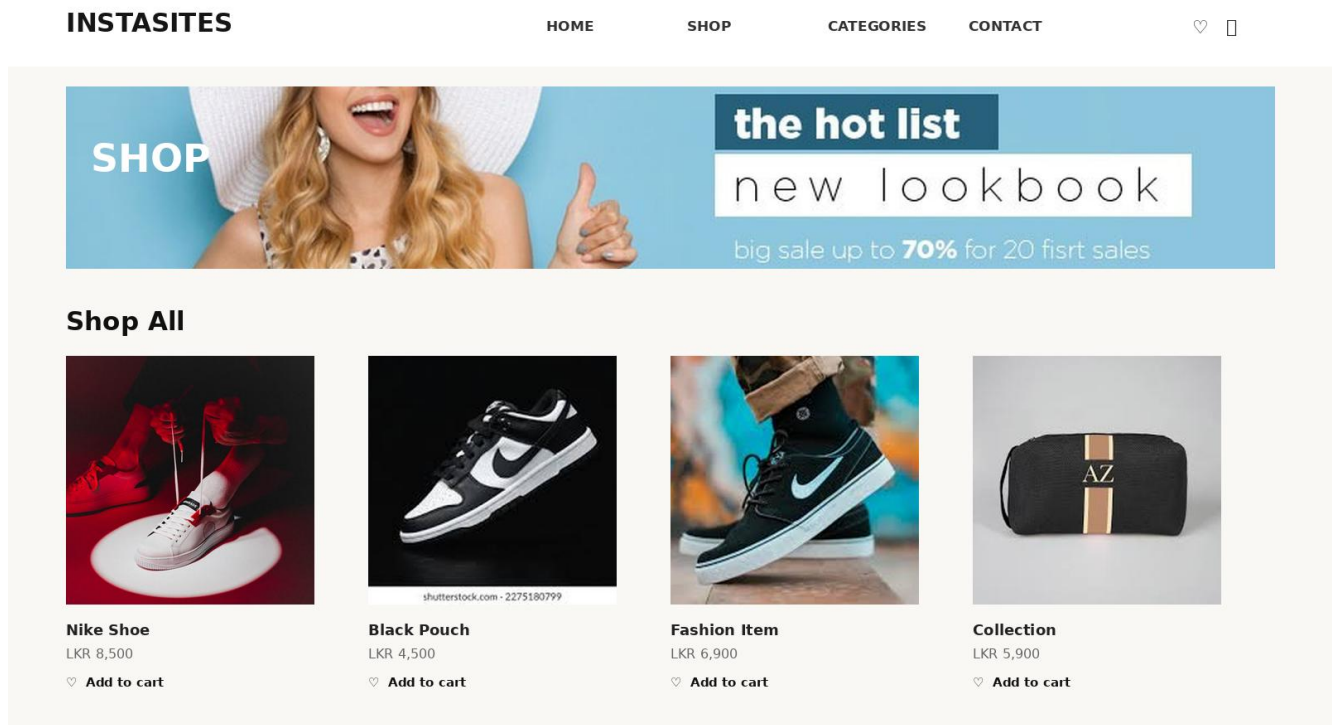

Figure. Catalogue-style interface representing the published WooCommerce Shop page and project products.

Product Detail

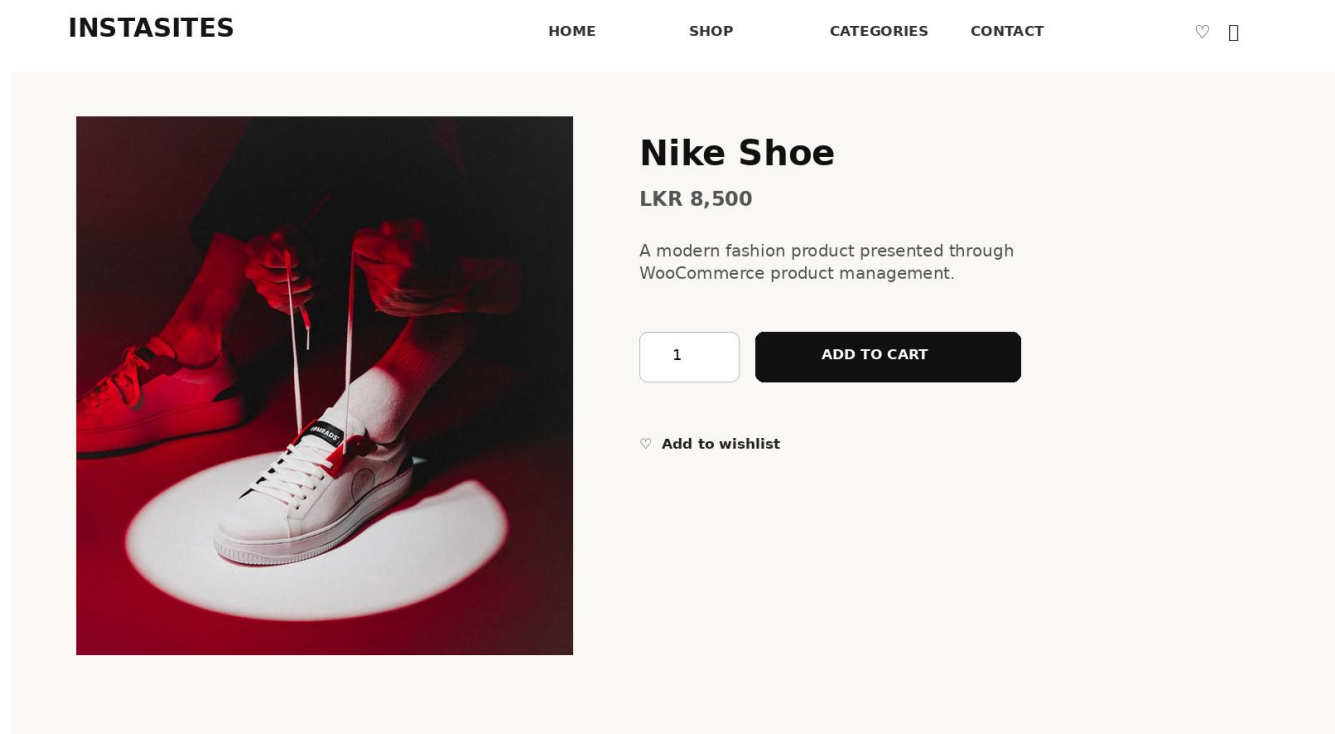

Figure. WooCommerce product detail structure with product image, price, quantity, cart and wishlist actions.

Shopping Cart

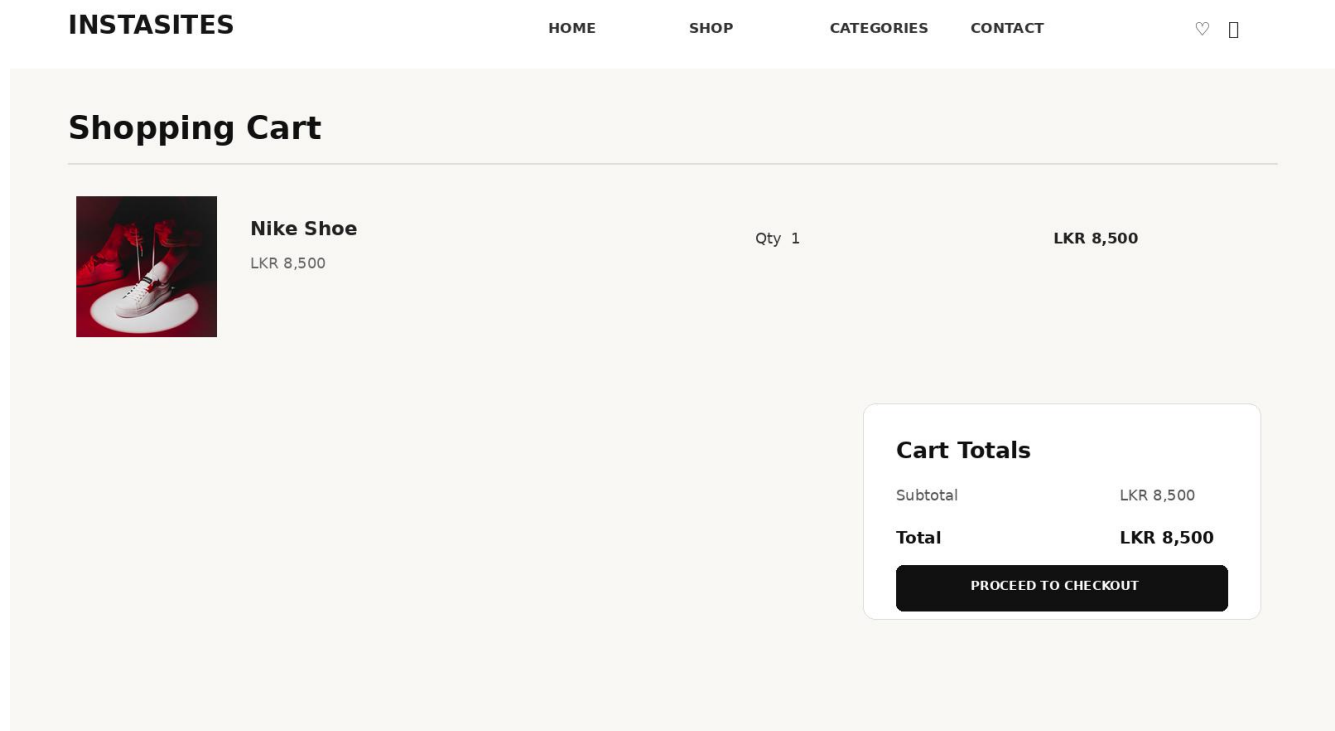

Figure. Cart workflow corresponding to the published WooCommerce Cart page.

Hello, Tevinu-Instasites

From your account dashboard you can view recent orders, manage addresses and edit account details.

9. E-Commerce Functionality

- WooCommerce catalogue and product records
- Shopping cart and customer sessions
- Checkout workflow
- Customer account pages
- Product categories/taxonomies
- Wishlist support through YITH
- Side-cart enhancement
- WooCommerce order-related database tables
- LKR currency configuration

10. Design & UX

The project combines the Blocksy theme with Elementor and WooCommerce-focused enhancement plugins.

Uploaded assets include multiple fashion banners, category images and product photography. This supports a visual, catalogue-oriented shopping experience with category discovery, product browsing, cart access, wishlist functionality and responsive page-building capabilities.

11. Performance & Maintenance

LiteSpeed Cache is present in the backup, indicating a performance optimisation layer. The backup also contains WooCommerce logs and WordPress/WooCommerce scheduled-action tables. For production deployment, caching, image optimisation, plugin updates, database backups, security hardening and checkout testing should be maintained regularly.

12. Testing Checklist

- Verify Home, Shop, Product, Cart, Checkout, Wishlist, Contact and My Account pages.
- Test responsive behaviour on mobile, tablet and desktop.
- Validate product prices, images and category assignments.
- Test add-to-cart, quantity update and removal.
- Test wishlist add/remove behaviour.
- Validate checkout form and payment/shipping configuration before production.
- Test customer registration/login and account navigation.
- Verify caching does not cause stale cart or checkout data.
- Check plugin/theme compatibility after updates.

13. Deployment / Restoration Notes

The uploaded archive is a WPvivid backup package. It includes separate database, uploads, theme, core, content and plugin backup archives. Package metadata records the original home URL as <http://instasites.local>. Restoration should be performed through a compatible WordPress/WPvivid environment, followed by URL replacement, permalink refresh, WooCommerce configuration review and end-to-end storefront testing.

14. Future Enhancements

- Add production payment gateway and shipping configuration if not already configured externally.
- Improve product catalogue depth and product metadata.
- Add SEO metadata and structured product data review.
- Optimise uploaded images to WebP/AVIF where appropriate.
- Add analytics and conversion tracking.
- Add automated backups and staging-to-production deployment workflow.
- Conduct WCAG accessibility review and performance testing.

15. Conclusion

InstaSites Fashion Store demonstrates practical WordPress e-commerce development using WooCommerce, a modern theme/page-builder stack and commerce-focused plugins. The uploaded backup provides evidence of the implemented commerce pages, products, categories, wishlist functionality, customer account flow, fashion media assets and underlying WordPress/WooCommerce database structure.
